ENGMAR

PRESENTATION / KNOW-HOW

ENGMAR **develops, manufactures and installs** systems for the extraction of welding or cutting fumes featuring **extraction torches** as well as mobile and centralized **extraction units**.

The welding torch with integrated extraction developed by ENGMAR provides efficient **welding fume capturing at the source** for most MIG/ MAG processes. ENGMAR provides a complete range of air or water cooled extraction torches going from 150 to 600 A. Different nozzle types and torch necks in combination with a very flexible hose give ENGMAR extraction torches excellent ergonomic and efficiency – even in case of intensive welding or difficult access.

ENGMAR also features mobile extraction units, suction tables, centralized high or low suction units as well as slit nozzles. The internal research and development department of ENGMAR develops and installs customer specific extraction systems for any type of machinery.

CENTRALIZED HIGH SUCTION UNIT

NEW AND KEY PRODUCTS

New **slit nozzle** for the extraction of TIG (GTAW) or stick (SMAW) welding fumes: The nozzle can be used with ENGMAR extraction units.

For optimized ergonomics and an enhanced operating range, ENGMAR features **swing arms with double axis or adjustable height** for wire feeder and hose support. Depending on the type, the swing arm provides a working radius from 3 to 5 meters and allows charges up to 70kg (154lbs).

MAIN CUSTOMERS

RENAULT ABB - BENTELER - AUTOMOTIVE ALSTOM - HEULIEZ BUS - JOHN DEERE - NEW HOLLAND - THULE
