VOLUM-E

PRESENTATION / KNOW-HOW

Leader in metal additive manufacturing, VOLUM-e supports new product development endeavors from its customers in the most demanding industries : aerospace and space, medical devices, electronics, but also through its parent company MMB, automotive, luxury packaging and jewelry. VOLUM-e makes prototypes qualified production parts with control over the complete value chain (design, CAD, production, post-treatment, tests and controls).

VOLUM-e combines 25 years of group know-how in 3D printing of organic and plastic materials, with 15 years of experience in that of metallic materials. This entity is voluntarily at the forefront of prototyping, through the industries it serves, its competences and its technological advance. And also at the forefront of the ongoing industrial revolution : the direct production of serial parts.

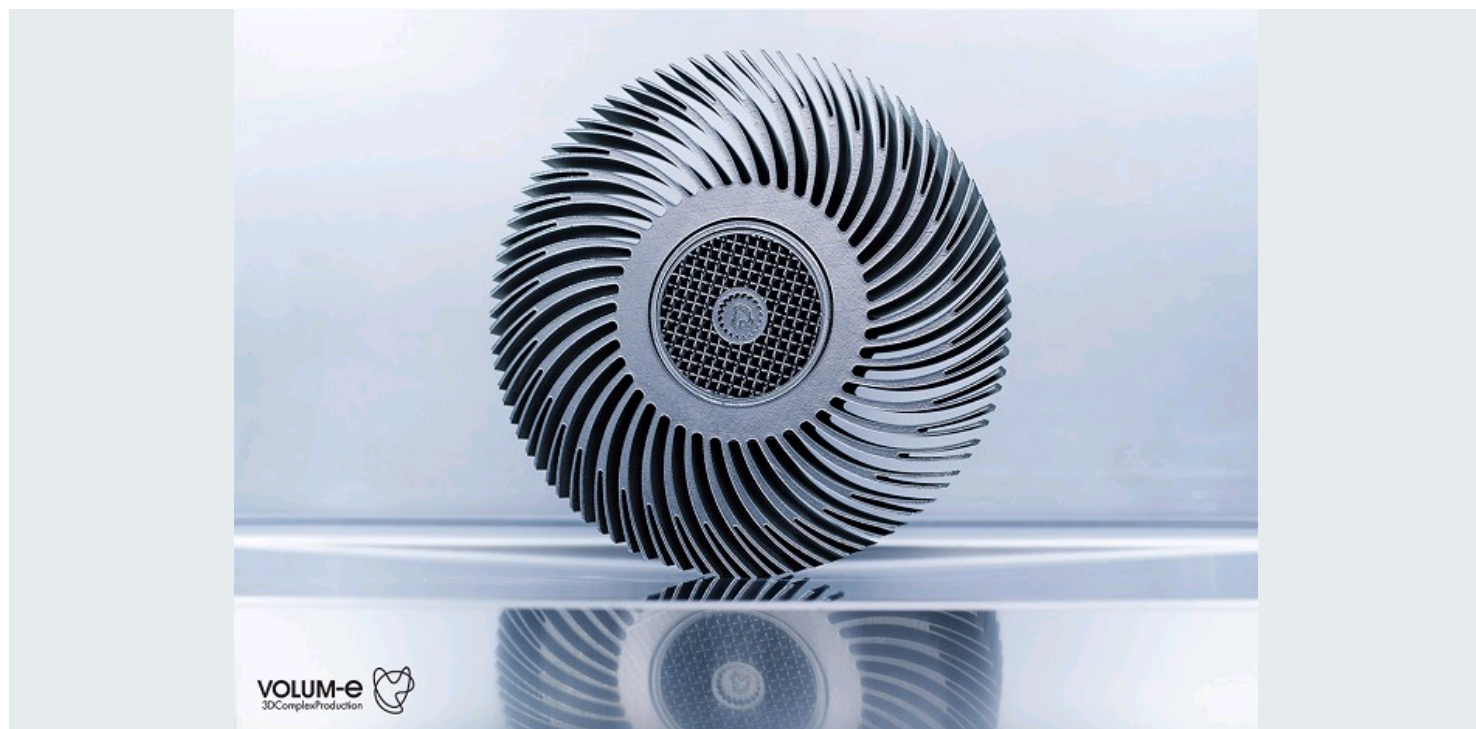

VOLUM-e stands on its own within 3DS Group, where the means and know-how are federated and mutualized. With a staff of 55 people, MMB and VOLUM-e realized a turnover of 6,7 million euros in 2017. Besides acting as reference for models and prototypes, VOLUM-e is positioned as a truly industrial partner that supports its customers from the initial idea to production.

ROUET // INTERNAL PROJECT

HEAT EXCHANGER // INTERNAL PROJECT

TURBO FAN // INTERNAL DEMONSTRATION PIECE

CARTER PROMETHEUS // ARIANEGROUP

NEW AND KEY PRODUCTS

At the forefront of rapid prototyping and of high quality plastic and metal additive manufacturing, VOLUM-e further expands its machine park and becomes the first French company to acquire an EOS M400-4. With four lasers for unprecedented manufacturing rapidity and increased productivity, the EOS M400-4 will allow VOLUM-e to reduce lead time and increase its production capacity for high-tech parts.
