INSTITUT DE SOUDURE

PRESENTATION / KNOW-HOW

The Institut de Soudure group incorporates the Institut de Soudure association and several subsidiaries including the Institut de Soudure Industrie service company.

The Institut de Soudure association serves the welding industry via its technical center, its three technological platforms and its two training schools. Industrial customers and most especially the industrial members of the association, benefit from the resources of this collective structure: its multiple R&D facilities, its document and standards library and monitoring unit.

Institut de Soudure Industrie, is a service company that works with industrial customers, and has the leading experts in materials, assembly technologies, non-destructive testing and inspection. Its vocation is to provide companies throughout the world with the most innovative solutions for their projects, in design, manufacture and maintenance of their welded equipment.

The Group Institut de Soudure is at the service of company through 6 activities : Inspection, Testing, Investigation, Training and certification of personnel, Research in Lorraine and education (2 schools) and Manufacturers and products certification.

The Group Institut de Soudure proposes :

- 26 offices in France including 12 training centres
- 3 centres in French overseas departments/territories and offices in Morocco, Indonesia, Thailand, Nigeria, Congo

MANDATORY INSPECTION FOR PRESSURE EQUIPMENTS

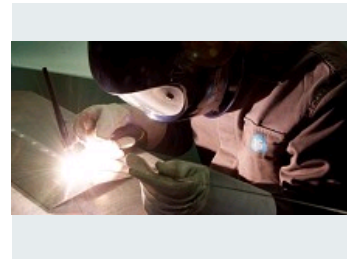

NON DESTRUCTIVE TESTING ON PIPELINE

MECHANICAL TESTING LABORATORY IN YUTZ

JOINING LABORATORY IN YUTZ

PRACTICAL WELDING TRAINING

NEW AND KEY PRODUCTS

INSTITUT DE SOUDURE with its 3 laboratories in Yutz, helps companies to innovate:

The Joining Laboratory brings together all the means for research and testing in the field of welding: conventional welding machines, equipment for laser, hybrid laser and electron beam welding and for brazing. There is also the Goin centre (Moselle), dedicated entirely to Friction Stir Welding (FSW).

The Mechanical Testing and Corrosion Laboratory offers a range of high-performance equipment including test machines of various capacities. We are able to carry out numerical simulation, to evaluate residual stresses and distortion induced by welding of materials, joints and equipment.

The NDT Laboratory brings innovative solutions in non-destructive testing. The Industrial Maintenance unit develops techniques suitable for the supervision of in-service facilities. The Composites division, in partnership with the PPE (Pôle de Plasturgie de l'Est), conducts NDT on complex, large-scale, composite workpieces.
