NEW AND KEY PRODUCTS

Chromatogeny... and now paper is water friendly!

An industrial demonstrator. A technological breakthrough.

Chromatogeny is a « Clean-Tech » breakthrough technology to produce, biosourced, barrier materials of tomorrow. Developed at industrial level by the CTP and BT³ technologies, this patented innovation proves to be superbly adapted to ligno-cellulosic materials.

Ecoproducts in everyday life !

Designing bio-based, recyclable and biodegradable cups is the aim of Biocup, a major project being carried out in the framework of the CTP&Citéo partnership. As an alternative to glues, the CTP has proposed ultrasonic bonding as a way of forming the cups. Demonstrators have been prepared and tested successfully in the same conditions as those found in fast-food outlets.

MAIN CUSTOMERS

CTP IS SERVING ALL INDUSTRIALISTS OF SECTORS: PULP - PAPER - BOARD - PRINTING - TRANSFORMATION
